

Sort Characters by Frequency:-

Code:-

```
class Solution {  
    public String frequencySort(String s) {  
        HashMap<Character, Integer> map = new HashMap<>();  
        for (char c : s.toCharArray())  
            map.put(c, map.getOrDefault(c, 0) + 1);  
        List<Character> list = new ArrayList<>(map.keySet());  
        list.sort((a, b) -> map.get(b) - map.get(a));  
        StringBuilder ans = new StringBuilder();  
        for (char c : list) {  
            for (int i = 0; i < map.get(c); i++)  
                ans.append(c);  
        }  
        return ans.toString();  
    }  
}
```

Output:-

The screenshot displays the LeetCode submission interface for the 'Sort Characters by Frequency' problem. The submission is 'Accepted' with a runtime of 15 ms and memory of 46.48 MB. The code is in Java, and the test results show three cases passed with input 's = "tree"' and output 'eert'.
