

Squares of a Sorted Array

```
class Solution {  
    public int[] sortedSquares(int[] nums) {  
        int n = nums.length;  
        int[] ans=new int[n];  
        int left=0, right = n-1;  
        for(int i=n-1;i>=0;i--){  
            if(Math.abs(nums[left])>Math.abs(nums[right])) {  
                ans[i] = nums[left] * nums[left];  
                left++;  
            } else{  
                ans[i] = nums[right]*nums[right];  
                right--;  
            }  
        }  
        return ans;  
    }  
}
```

Case 1 Case 2

Input
nums =
[-4, -1, 0, 3, 10]

Output

Find Pivot Index

```
class Solution {  
    public int pivotIndex(int[] nums) {  
        int total = 0;  
        for (int num : nums) {  
            total += num;  
        }  
        int leftSum = 0;  
        for (int i = 0; i < nums.length; i++) {  
            int rightSum = total - leftSum - nums[i];  
            if (leftSum == rightSum) {  
                return i;  
            }  
            leftSum += nums[i];  
        }  
        return -1;  
    }  
}
```

The screenshot displays the LeetCode interface for the 'Find Pivot Index' problem. The left sidebar shows the problem status as 'Accepted' with 747/747 test cases passed, submitted by 'tameem_shaik' on Sep 15, 2026. A promotional banner for 'Unlock the Full LeetCode Experience' is visible. The main area shows the solution code in Java, which is identical to the code provided in the first block. The right sidebar shows the 'Test Result' section, indicating 'Accepted' with a runtime of 0 ms. It lists three test cases, all of which are passed. The input for Case 1 is 'nums = [1,7,3,6,5,6]' and the output is '3'.
