

Remove Element:-

Code:-

```
class Solution {  
    public int removeElement(int[] nums, int val) {  
        int k = 0;  
        for (int i = 0; i < nums.length; i++) {  
            if (nums[i] != val) {  
                nums[k] = nums[i];  
                k++;  
            }  
        }  
        return k;  
    }  
}
```

}Output:-

The screenshot displays the LeetCode submission interface for the 'Remove Element' problem. The code is written in Java and is shown in the 'Code' tab. The runtime performance is shown as 0 ms, beating 100.00% of other submissions. The memory usage is 43.38 MB, beating 78.73% of other submissions. The test results show that the code passed all test cases, including Case 1 and Case 2.

Code:

```
Java  
4 for (int i = 0; i < nums.length; i++) {  
5     if (nums[i] != val) {  
6         nums[k] = nums[i];  
7         k++;  
8     }  
9 }
```

Runtime: 0 ms | Beats 100.00%

Memory: 43.38 MB | Beats 78.73%

Testcase: Accepted Runtime: 0 ms

Case 1: Input: nums = [3, 2, 2, 3], val = 3. Output: [2, 2]. Expected: [2, 2].

Remove Duplicates from Sorted Array:-

Code:-

```
class Solution {  
    public int removeDuplicates(int[] nums) {  
        int k = 1;  
        for (int i = 1; i < nums.length; i++) {  
            if (nums[i] != nums[i - 1]) {  
                nums[k] = nums[i];  
                k++;  
            }  
        }  
        return k;  
    }  
}
```

}Output:-

The screenshot displays the LeetCode interface for the problem 'Remove Duplicates from Sorted Array'. The submission is by user 'tameem_shaik' and is marked as 'Accepted'. The code editor shows the following Java code:

```
8  
9  
10  
11  
12  
    }  
    return k;  
}
```

The test results section shows two test cases, both of which are 'Accepted'. The input for both cases is [1, 1, 2] and the output is [1, 2]. The runtime for both cases is 0 ms.

On the left side of the interface, there is a performance comparison chart showing the submission's performance relative to other solutions. The chart indicates that the submission is faster than 100% of other solutions.
