

String Matching in an Array:-

Code:-

```
class Solution {
    public List<String> stringMatching(String[] words) {
        List<String> result = new ArrayList<>();
        for (int i = 0; i < words.length; i++) {
            for (int j = 0; j < words.length; j++) {
                if (i != j && words[j].contains(words[i])) {
                    result.add(words[i]);
                    break;
                }
            }
        }
        return result;
    }
}
```

Output:-

Naive algorithm for Pattern Searching:-

Code:-

```
import java.util.ArrayList;
public class GFG {
    static ArrayList<Integer> search(String pat, String txt) {
        int m = pat.length();
        int n = txt.length();
        ArrayList<Integer> ans = new ArrayList<>();
        for (int i = 0; i <= n - m; i++) {
            int j;

            for (j = 0; j < m; j++) {
                if (txt.charAt(i + j) != pat.charAt(j))
                    break;
            }

            if (j == m)
                ans.add(i);
        }

        return ans;
    }

    public static void main(String[] args) {
        String txt = "aabaacaadaabaaba";
        String pat = "aaba";

        ArrayList<Integer> res = search(pat, txt);

        for (int it : res) {
            System.out.print(it + " ");
        }
    }
}
```

Output:-

```
for (int it : res) {
    System.out.print(it + " ");
}
}
```

0 9 12

Output

0 9 12
